General Description:

18 to 32 vdc input requirements, 28 vdc , unit shall operate when subjected to positive or negative transients of 45 volts for 100microseconds
output voltage from pin b shall change state when a ferrous body approaches center of sensing face at a gap of 0.095, but not above a gap of
0.135 when the peripheral speed of the ferrous body is 45 to 55 inches per second

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

Yes - demil/mli
