**End Application:**

3130148310 aircraft refuel stores

**Product Name:**

Ars container gauging kit

**Special Features:**

The kit is comprised of the necessary hardware to inflate and measure the internal pressure of an ars container. A high pressure nitrogen cart provides the source of gas to fill the container. The kit contains a ball chuck with an attached fitting, which provides a means to thread the ball chuck to the supply hose of the nitrogen cart. The ball chuck is used to supply nitrogen gas to the container through the schrader valve built into the container. The internal pressure of the container is measured by the low pressure gauge also supplied in the kit. The gauge has a ball chuck threaded onto it so that the gauge can be used to measure the container pressure by placing the ball chuck on the schrader valve. The purpose of the kit is to prevent corrosion and help preserve the aerial refueling store in its container.

**Shelf Life:**

N/a

**Unit Of Measure:**

--

**Demilitarization:**

Yes - demil/mli
