Overall Length:

15.750 inches

Overall Height:

3.280 inches

End Application:

Ground power generator system; next higher assembly is tg200878

Engine Section Location:

Combustion chamber

Special Features:

Combustor cover assembly, a one and one half (1 1/2) hole in dome receives combustor can neck, secured by a snap ring; fuel/air nozzle and ignitor are bolted to cover; a temperature sensing element is mounted behind fuel nozzle

Material:

Nickel alloy

Material Specification:

Per teledyne ems607, filler is a ceramic insulation mfr ref all material responses

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fiig:

A530f0
