| g                                            |
|----------------------------------------------|
| End Application:                             |
| F110 aircraft gas turbine engine             |
| Design Type:                                 |
| Axial compressor                             |
| Blade Attachment Method:                     |
| Pin                                          |
| Criticality Code Justification:              |
| Czbj and czcj and bglw and feat              |
| Product Name:                                |
| Original name on dwg vane, compressor stator |
| Engine Section Location:                     |
| High pressure compressor                     |
| Stage Number:                                |
| 2                                            |
| Special Features:                            |
| T.O. 2j-f110-14, fig 62                      |
| Shelf Life:                                  |
| N/a                                          |
| Unit Of Measure:                             |
|                                              |
| Demilitarization:                            |
| Yes - demil/mli                              |
| Fila:                                        |
