Overall Length:

16.120 inches

Overall Width:

0.492 inches

Material Thickness:

Between 0.011 inches and 0.013 inches

End Application:

F414-ge-400 engine

Criticality Code Justification:

Agav

Product Name:

Seal, leaf, outer segment

Engine Section Location:

Combustion chamber

Material:

Nickel alloy

Material Specification:

L-605, haynes 25 assn standard single material response

Fsc Application Data:

High pressure turbine nozzle

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fiig:

A10700
