54200zz1bfkm hydraulic power unit

**Design Type:** 

Reusable

## **Special Features:**

Return filter is used to filter the return fluid on the hydraulic power unit, it is spare part of the hydraulic power nuit. Replace the filter element any time the clogged filter indicator litht is triggered or when the pop-up indicator located on the filter head changed to red during operation. Replace the filter element annually to ensure proper cleanliness of the hydraulic system. This is a requirement. Standard filter changed depend on how frequently the hpu i sused and the cleanliness of the fluid along with the environment in which the hpu is exposed. Periodic fluid analysis is recommended to properly determine the optimum frequency of filter element changes.

## Media For Which Designed:

Fuel/oil, hydrocarbon

Shelf Life:

N/a

**Unit Of Measure:** 

--

Demilitarization:

No

Fiig:

A24000
