End Application:

W/s seawolf class ssn

Body Construction:

Solid

Product Name:

Link, drag, upper

Special Features:

Solid piece construction: width 2.255, length from hole center at first end to hole center at second end is 5.080 inches . First end with hole through thickness of 2.5295; second end clevis, each with hole. Thickness of each clevis arm is 0.6255. All holes same diameter: 1.5008 inches . Next higher assembly 5985-01-492-3839 antenna subassembly.

Material:

Copper alloy

Material Specification:

Astmb150 alloy c62300 temp to 55 assn standard single material response

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fiig:

A52410
