Environmental Protection:

Corrosion resistant

Basic Material:

Copper alloy and nickel

Content Within Each Unit Package:

10 lb

Criticality Code Justification:

Feat

Special Features:

Unit package type is container; material consists of gas atomized copper, nickel, indium alloy; particle shape is spherical; coating is dense, has little porosity and low oxide content; resists corrosion, galling and fretting; certification: ge b50tf72

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fiig:

T166-s
