**Basic Material:**

Nickel and molybdenum and aluminum

**Content Within Each Unit Package:**

12.5lbs

**Special Features:**

Nsn used to purchase a of 80contains to a of 159contains; certification ge b50tf166; rb 70-80 hardness; 7000 psi strength, but varies with smooth or roughened surfaces; machines/grinds readily with all grades of cutting tools; a self bonding composite powder consisting of molybdenum-nickel-aluminum used as a general purpose powder for service conditions requiring a tough, wear and corrosion resistant coating. Recommended for salvage and buildup of machinable and grindable steels

**Shelf Life:**

N/a

**Unit Of Measure:**

--

**Demilitarization:**

No

**Fiig:**

T166-s
