**Basic Material:**

Nickel-chromium alloy and aluminum alloy

**Content Within Each Unit Package:**

12.5lbs

**Special Features:**

Nsn used to purchase a of 160 containers and up; certification ge b50tf192 class a, ge b50tf162 class a, msrr 9507/48 and garrett 52432 xxi; rb 85 hardness; 5500 psi strength; wet grind w/silicon-carbide wheel; ; nickel-chromium-aluminum-yttrium alloys that provide outstanding resistance to oxidation and corrosion resistance in enviroments up to 1800deg (f).Used primarily for bond-coats in thermal barrier coatings and also promising results in protecting boiler tube walls from corrosion and sulfidation/oxidation

**Shelf Life:**

N/a

**Unit Of Measure:**

--

**Demilitarization:**

No

**Fiig:**

T166-s
