Current Type:

Ac

Usage Design:

Any acceptable

Structural Design:

Cylinder

Steam Heated Cylinder:

Included or not included

Voltage In Volts:

24.0

Phase:

Three

Frequency In Hertz:

60.0

Supplementary Features:

Includes all steel welded construction; removable panels for easy access for cleaning and maintenance; chains, belts, sprockets, and pulleys are fully enclosed; gas and electrically heated models feature a full 12 inch diameter steel cylinder; steam heated models feature an 11 inch diameter heated cylinder constructed of astm a53 grade b steel, tested to 350 psi; motors are individually fused and thermally protected; an infinitely variable speed drive allows adjustments to any speed between 10 and 30 feet per minute; padding and cover cloths are nomex material; the entire machine is finished with high grade machine enamel

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fiig:

T155-e
