End Application:

C17a aircraft; life raft assembly

Special Features:

Folding procedure requires plate (two) . During life raft folding, each metal plate is placed on top of an already folded section of life raft. Remaining portion is folded; while folding, pressure is applied to folds and nylon material is flattened and smoothed out keeps folds parallel & equally spaced. Plates are then removed and procedure continues without using metal plates; used with p/n 17g910022-1: cover, comp

Functional Description:

Holds the folds in the life raft during the folding process; on the left side of already folded life raft both plates are placed over folds; fold is continued on right side of life raft

General Description:

Aluminum, anodized; 38 in lg, 7 in w; 1 in h; wt 8 lbs

Fsc Application Data:

46 man life raft assembly, packing container p/n 17g910020-1

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No
