End Application:

Aerosol can puncture device system

Filtering Media Design:

Mesh 1st filtering media response

Product Name:

Combination coalescing filter

Special Features:

Item is a combination coalescing filter with an activated carbon cartridge which screws into the 3/4 inch bung of a drum. The filter is designed to adsorb polar organic hydrocarbons and high molecular weight volatile organic hydrocarbon compounds. The material of the filter is coconut shell carbon 6 x 8 mesh size with approximately 1000-1150 m²/g surface area in a polyethylene housing.

Material:

Carbon filtering medium

Media For Which Designed:

Fuel/oil, hydrocarbon

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fiig:

A24000
