End Application:

Used on celine hot water heater, swl series, model v670swl624

Reference Data And Literature:

Technical manual for hot water heater model v670swl6

General Description:

The safety system is an over-temperature safety system which will close the main control valve upon an over-temperature condition. The system utilizes an adjustable electric thermostat which monitors the temperature of the water. If an over temperature condition is detected, the thermostat sends an electric signal to the valve thus closing the control valve. The system requires a 120 volt, 5 amp circuit

Shelf Life:

N/a
