End Application:

Boiler control system; p/n 06036-cc-m3

Special Features:

The fireye e110 flame-monitor system is a microprocessor based burner management control system designed to provide the proper burner sequencing, ignition and flame monitoring protection on automatically ignited oil, gas and combination fuel burners. In conjunction with limit and operating controls, it programs the burner/blower motor, ignition and fuel valves to provide for proper and safe burner operation. Flame monitor includes: a non-volatile memory which allows the control to remember its history and present position even when power is interrupted, a constant flame signal read-out display module or 0-10 vdc output (epd programmers only), dipswitches located on the ep programmer to allow selectable purge time, remote display capability, announce 16 additional interlocks using e300 expansion module.
