General Description:

The deployment kit provides hoses, connection and electrical cable. This kit will allow the heat exchanger module to be placed to 120 feet away from the dynamometer system with the cooling water supplies located within 24 feet of the heat exchanger. Additional hoses have been included for situations that require the fresh water module 73087 to be utilized up to 100 ft from the dynamometer system. 100 ft of cable is provided for each of the electrical components. A cast iron foot valve with integral strainer is supplied to facilitate systems priming and supply. All of these items will be supplied in a steel container with lifting eyes and fork pockets. The deployment kit consists of 29 items which have no part numbers or model numbers assigned.

Shelf Life:
