Special Features:

C/o main test stand assembly 84 in. W, 84 in. D, 78 in. H; and electrical equipment cabinet 48 in. W, 18 in. D, 66 in. H

Functional Description:

Used to test the performance and operating characteristics of the oil flow circuit of the main and afterburner oil cooler assemblies

Reference Data And Literature:

T.O. 33d4-6-296-1

Supplementary Features:

Designed to test the performance and operating characteristics of oil flow circuit of main and afterburner oil cooler assemblies, electrically pneumatically and hydraulically operated single piece unit, contains components required to supply oil for testing oil cooler valves, conditioning oil by filtering, heating, or cooling and monitoring test results

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fiig:

T361-c
