Depth:

22.000 inches

End Application:

F-4 aircraft

Test Type For Which Designed:

Canopy jettison

Special Features:

F15 lbs; performs pyrotechnic and pneumatic tests; comes with manual method of testing and has gauge type indicators; method of connection is cables and pressure hoses; readout devices, pressure gages

Functional Description:

Item provides a nondestructive check on the emergency canopy jettison system as well as the complete pyrotechnic and pneumatic sequency rocket seat ejection system

Height:

8.000 inches

Reference Data And Literature:

T.O. 33-1-11y

Supplementary Features:

F15 lbs; performs pyrotechnic and pneumatic tests; comes with manual method of testing and has gauge type indicators; method of connection is cables and pressure hoses; readout devices, pressure gages

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

Yes - demil/mli

Fig:

T228-a
