Overall Length:

99.000 inches

Overall Height:

50.000 inches

Overall Width:

51.000 inches

End Application:

Tf-33 aircraft engine age.

Functional Classification:

Gg-1.4

Functional Description:

Provide aircraft maintenance facilities with a portable unit to accomplish engine compressor cleaning; using the carboblast technique, the unit is used to clean accumulated foreign deposits that have formed on compressor blades and stators of engines which indicate a definite loss of efficiency and a thrust degradation

Reference Data And Literature:

T.O. 33e22-3-6-3

General Description:

Provide aircraft maintenance facilities with a portable unit to accomplish engine compressor cleaning; using the carboblast technique, the unit is used to clean accumulated foreign deposits that have formed on compressor blades and stators of engines which indicate a definite loss of efficiency and a thrust degradation

Shelf Life:
