Functional Classification:

A-9.3

Special Features:

4 manual method of testing; hoses method of connect; two main units; 1 main structure which houses gauges, instruments, controls, valves, motors, and pumps; 2 open structure which c/o reservoir, filter, and 20 hp variable speed motor and main pump

Functional Description:

The fuel pump test stand is to provide for accurate and rapid testing of fuel pumps & components used on modern aircraft in accordance with the manufacturer's test specifications

Reference Data And Literature:

T.O. 33d2-3-48-1

Supplementary Features:

Power requirements 440 volt, 3 phase

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fiig:

A23800
