End Application:

F-16 aircraft age.

Special Features:

Video processor interface test adapter

Functional Description:

Provides electrical/mechanical interface btwn sru and analog test station, w/includes wiring btwn sru mating connector and fixed connections of station; loads, circuit protection and special switching circuits for station; input circuit paths for power to satisfy sru's input test requirements; output circuit paths voltage amplitude measurements, power measurements, loads, select resistors, to verify sru operation, calibrate and to isolate malfunctions; signal generator and/or processor, w/will generate signals that the station cannot; c/o integrated circuits, transistors and discrete components

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No
