End Application:

Ang c-130h aircraft support equipment

Product Name:

Test circuit, sample and hold

Special Features:

Requires 115 vac 60 hz power; mounted in suitable cabinet with a panel with necessary controls and plug in jacks

Functional Description:

Used to determine correct resistor in vertical erection monitor circuit when pitch or roll sensor is replaced during repair of the vertical reference unit

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No
