End Application:

Tf-30 engine age.

Product Name:

Diagnostic test system, engine vibration

Special Features:

Consist-one digital signal processor (dsp) for each test cell and one central host processor, the dsp collects and processes vibration and speed data from the engine under test, vibration information is sent to host processor for trim balancing and vibration diagnosis

Functional Description:

Accurately predicts engine vibration faults

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No
