End Application:

F-11 aircraft age.

Special Features:

Company item name-adapter, interface test

Functional Description:

Provides electrical/mechanical interface between sample hold pcb and analog test station; includes- wiring; power supply programming components for fixed power sources; load, signal conditioning circuits, special switching circuits; input circuit paths for power, stimuli, signal sequencing/conditioning; output circuit paths for waveform analysis, voltage amplitude measurements, time interval measurement, power measurements, loads, signal conditioning

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No
