End Application:

Kc-135

Product Name:

Electromagnetic tester

Reference Data And Literature:

T.O. 33d2-8-385

General Description:

C/o control and display panel; power converter unit; electronics units containing a microprocessor; 115.0 vac; 400.0 hz; single phase; minus 40.0 to plus 55.0 degrees c; provides semi-automated verification of transorb clamp voltages and diode leakage currents of the components in the three types of electromagnetic protection assemblies

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

Yes - demil/mli
