**End Application:**

Kc-135

**Product Name:**

Electromagnetic tester

**Reference Data And Literature:**

T.O. 33d2-8-385

**General Description:**

C/o control and display panel; power converter unit; electronics units containing a microprocessor; 115.0 vac; 400.0 hz; single phase; minus 40.0 to plus 55.0 degrees c; provides semi-automated verification of transorb clamp voltages and diode leakage currents of the components in the three types of electromagnetic protection assemblies

**Shelf Life:**

N/a

**Unit Of Measure:**

--

**Demilitarization:**

Yes - demil/mli
