End Application:

B-1b aircraft engine fuel scavenge pump element assembly

Nominal length:

10.000 inches

Nominal width:

10.000 inches

Nominal height:

5.500 inches

Special Features:

Matl: steel assembly; to name: impeller shaft holding fixture

Functional Description:

Used to secure rotor shaft while tightening/removing impeller nut in the fuel pump element

Reference Data And Literature:

To 6j10-2-16-3

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fiig:

A505c0
