End Application:

F118-ge-100 engine

Nominalwidth:

0.500 inches

Nominaldiameter:

32.000 inches

Special Features:

23.000 in. I.D.; steel ring is cut into four 90 degree segments

Functional Description:

Fixture is required to maintain roundness of aft outer flange during dabber tig weld buildup and to support the flange during subsequent machining

Unpackaged Unit Weight:

4.000 pounds

Reference Data And Literature:

Serd no. 1824

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fiig:

A505c0
