End Application:

F110-general electric-100

Nominal length:

37.500 inches

Nominal width:

37.500 inches

Nominal height:

4.000 inches

Special Features:

Made from hardened alloy steel; all parts are black oxide coated for corrosion protection

Functional Description:

Provides the means to hold, position and secure the stage nozzle for restoration of the forward surfaces of the forward outer band lip, forward inner band flange and aft inner band flange during machining/grinding operations; capable also of dimensional inspection of the lip and flange locations; is designed to be used with a rotating machine tool table and provisions are made for mounting bolts and for attaching lift eyes

Unpackaged Unit Weight:

450.000 pounds

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

Yes - demil/mli

Fig:

A505c0
