End Application:

F-16 a/b/c/d acft

Special Features:

C/o a combination case, voltage detectors 2; various adapters for connection of items to be tested

Functional Description:

Used to test for stray voltage, release and firing voltage, weapons disconnects, and rack breeches; verifies correct system operation and ensures weapon separation will occur upon command

Reference Data And Literature:

Serd 75060; t.O. 33d5-3-47-1

Supplementary Features:

Also known as preload armaments circuits test set

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

Yes - demil/mli

Fig:

A23800
