End Application:

F-16 a/b/c/d

Functional Description:

Will perform in flow/shut-off functional tests of the external fuel transfer shut-off valve; will verify fuel shut-off capability after overhaul and include the application of test fluid to 150 gpm at the valve inlet port; this item will adapt the part number 60814 coil valve to the test tank inlet adapter and must provide sufficient clearance between valve with control port adapter hose installed and top of test tank; the control port on valve supplies pressure to an internal poppet, controlling fuel flow, using control port adapter, or equivalent, for test tank internal bulkhead connection

General Description:

A fabric bag shall be required for retention of loose parts; a rigid end item container shall also be required; consist of a four hole flanged adapter; split clamp

Shelf Life:

N/a

Unit Of Measure:
