**End Application:**

A/m32a-102

**Functional Description:**

Used to test the sub-assembly of the air control unit in which errors can be detected

**Reference Data And Literature:**

Serd no. 0089

**General Description:**

Dim. 21.000 in. Lg; 18.000 in. W; 21.000 in. H; control three separate air supplies at temperatures from 45 degrees f. To 200 degrees f.; has interface with external electronic equipment through the rs232 port; three power supplies are capable of converting 115 volts, 400 h single phase power into 4 direct current outputs: 5.4 amps at +5 vdc, up to 2.1 amps at +15 vdc and -15 vdc, and up to 4.6 amps at +24 vdc each at 122 degrees f. temp.; dc voltage is used to power the central processing unit, instrumentation, indication circuitry and valve actuating circuitry

**Shelf Life:**

N/a

**Unit Of Measure:**

--

**Demilitarization:**

No
