**End Application:**

F100 pw jet engines

**Special Features:**

This indicators form, fit, and function are identical to indicator assembly, rear compressor (4920012382517) but with the added feature/benefit of an interface unit, automatic data processing (7025013272392); this unit is used with test stand, aircraft engine (4920004383812) and test stand, aircraft engine (4920010415863); it is a part of adapter kit, test (4920005058807)

**Functional Description:**

Vthis unit is used to measure rcv (rear compressor variable vane) civv (compressor inlet variable vane) angle; and it is used to read inlet guide vanes on the j79-ge-15/17 engines; this unit reads measures and converts and displays

**General Description:**

Very high order of accuracy and stability is achieved with this unit

**Shelf Life:**

N/a

**Unit Of Measure:**

--

**Demilitarization:**

Yes - demil/mli
