End Application:

An/alq-155

Special Features:

C/o graphics terminal, dc power supply, bus analyzer assembly, digital test unit, matrix switch, two (2) power supply, power supply no. 2, fan assembly, power distribution unit, pattern generator, computer, switch controller, signal source, universal counter, digital voltmeter, disc drive, current sensing assembly, programmer, junctions box, line printer, printer stand; dimensions are 81.000 inch height by 195.000 inch width by 48.000 inch depth

Functional Description:

Provides diagnostic testing using stimuli, measurement, and switching devices to exercise the electrical characteristics of the uut for fault detection and isolation to the component level; operation is controlled by test program software resident on a disk/tape drive with operator intervention; performs self-test for autonomus fault detection and isolation

Reference Data And Literature:

Serd number 0006b
