End Application:

B1-b aircraft

Special Features:

Station is self contained pneumatic testing system. Must be capable of providing means to filter, regulate, heat and control an external source of clean dry air. It must incorporate air filter, regulator, valves, quick-disconnects, heater, heat controller w/front panel instrumentation to measure/indicate air flow rate, air pressure and air flow temperature

Functional Description:

Used to test/troubleshoot air cooled Irus for proper air flow, pressure, and temperature

Reference Data And Literature:

SERD-NO-.76-X11C

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fiig:

T228-a
