End Application:

F100-pw-100/-200 aircraft engine

Functional Description:

Tooling is used for shotpeening the front outer lugs, front outer i.D. Snap and the remainder of the 5th stage compressor disk with the exception of the blade slots. The part is inverted in fixture for access to concealed area from first position. This mask will protect the blade slot and adjacent surfaces during the shotpeen operation and will be used with other reference tooling
