End Application:

A-10

Special Features:

C/o node 1 (simulated line replaceable units); node 2 (software interfaces); node 3 (interface to low altitude safety and targeting enhancements (laste)), also interface with mil-std-1553 bus; node 4 (interfaces an a-10 cockpit into the extendable integration support environment)

Functional Description:

An integrated support facility in that it is dedicated to a single system; embedded computer system; integrates hardware and software components and simulations via an extendable integration support environment network providing realistic mission scenarios for the development and testing of hardware and software modifications to the a-10 aircraft

Shelf Life:

N/a
