End Application:

E-3, an/apy1/2-rsip

Inclosure Feature:

Multiple item w/housing

Test Type For Which Designed:

Control antenna and determine evaluation squint angles

Special Features:

C/o transmitter, 4 ft parabolicish transmitting antenna, crystal detector, computer system, interconnecting cables; size 3 inch length, 4 inch width, 6 inch height, 200 lbs weight, installation factors = a power source of 115vac, 60hz, 1 phase, 15a and 2bvdc, 5a is required; an item that currently exists in government inventory at boeing kent range facility with part number976b404g01 and cage code 18323

Functional Description:

Eused to conduct airborne warning and control system antenna squint angle testing; used to support the radar system of the e-3 (awacs) including theradar system improvement program (rsip) components

Reference Data And Literature:

Serd no. 0030

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No
