End Application:

Afats

Special Features:

The range of hydraulic fluid pressures are greater for this pump unit than for the pump unit, test station, pmu-64/e (low pressure pump module)

Functional Description:

Used to supply hydraulic fluid to the test stations under various filtered, monitored, & flow conditions to test aircraft fuel accessories; an automated, fix installation, hydraulic pumping unit under the control of an embedded computer

Reference Data And Literature:

Serd no. 1064

General Description:

Includes an operator interface with a display, control switches, & a keyboard which will allow manual control of the pump module if the local communication network is inoperable; the high pressure pump module interfaces with the test stations via distribution piping & will modulate the output based on combined test station requirements
