End Application:

F100-pw-229

Special Features:

Characteristics are 30.000 inch length; 24.000 inch width; 12.000 inch height; 120 lbs weight

Functional Description:

Used to install the 7th, 8th, and 9th stage compressor inner stator shroud segments by pre-positioning the stator segment, damper spring, and shroud segment into the tool and then rotating the shroud into the stator in a controlled manner; prevents overloading the anti-rotation lugs in the stator

Reference Data And Literature:

Serd no. 7896
