**End Application:**

F110-ge-100/129/400 & f101-ge-102& f118-ge-100

**Special Features:**

Manufacturer's suggested name is fixture, machining-disk, high pressure turbine rotor; characteristics are 23.3" x 23.3" x 2.4" & 150 lbs; articles requiring support is nsn 2840-01-307-9565; c/o a heavy steel base ring and a steel clamp ring (ring is retained by 36 socket head cap screws) & this fixture will accommodate 2 disk configurations

**Functional Description:**

Used to mount the high pressure turbine disk onto the machine table for the machining operations

**Reference Data And Literature:**

Serd no. 6204

**Shelf Life:**

N/a

**Unit Of Measure:**

--

**Demilitarization:**

No

**Fig:**

A505c0
