End Application:

F100-pw-229 aircraft engine

Nominal length:

12.000 inches

Nominal width:

12.000 inches

Nominal height:

14.000 inches

Special Features:

Steel construction and c/o an angled base plate and a vertical support plate

Functional Description:

Used to provide holding and support during worn feather seal slots in the 7th, 8th, and 9th vane segments; holds stator segment on a jig borer

Unpackaged Unit Weight:

120.000 pounds

Reference Data And Literature:

Serd no. 8799

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fig:

A505c0
