End Application:

Hppts/alq-99 xmtr

Special Features:

The assembly contains 3r-c networks, each consisting of a 15 uf capacitor in series five parallel 50ohm resistors. One series r-c network is connected from each phase of the apuoutput to neutral

Functional Description:

The apu power damping assembly absorbs distortion products in the 400hz power which are generated by the band 2 transistor when it goes into radiate mode

Special Test Features:

The power damping assembly satisfies the requirements to provide the physical and electrical connections between the high-power device test system and the unit under test to facilitate its testing, troubleshooting, and repair

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

Yes - demil/mli

Fig:
