End Application:

F/a-18

Product Name:

Tool set, installation/extraction

Special Features:

The tool set contains a body tool, a pin installation tool, a pin extraction tool and a striker and tapset. The first three tools are threaded at the end to engage internal threads of the pin of the valve body as required. The striker slides on the shaft of either of the first two tools and is used to strike the head, thus driving out the pin or valve body. The body tool is used to push the rfi valve insert firmly into the reamed bore of the valve body. The pin installation tool is then used to press the expander pin into the valve body so that the external lands bite into the cavity wall to seal and lock the insert into place. The body insert of some lee check valves normally removed using this set may not be threaded. The tapset is provided so that the insert can be threaded to accommodate the threads of the body tool when removal of the insert is necessary.
