End Application:

F/a-18

Product Name:

Tool, installation

Special Features:

The tools consist of the two special bolts and a striker. Each bolt is sized to engage threads in either the pin or the plug body inserted into the manifold cavity. The striker slides on the shaft of the bolt and is used to strike the bolt head, driving out either the pin or the plug. A third tool is then used to press the new pin into the replacement plug, so that the lands of the plug bite into the surrounding material to seal and lock the insert in place.
