Specific Usage Design:

To support the operational flight programs loading operation for the station keeping equipment control module, and to provide the stable base for the ru during the 1-level software reloading operation

Nominal length:

12.000 inches

Nominal width:

14.000 inches

Nominal height:

5.000 inches

Special Features:

Part name assigned by controlling agavgc-17a

Functional Description:

A mechanical device that will provide a stable base for the station keeping equipment control module during the 1-level software reloading operations

Reference Data And Literature:

Serd 720611

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fig:

A505c0
