End Application:

Ge aircraft engines

Nominal length:

12.000 inches

Nominal width:

8.000 inches

Nominal height:

6.000 inches

Special Features:

Company item name- fixture measure, variable stator vane movement; supercedes serd 3501, p/n 856a1194g04 (01-146-4940)

Functional Description:

Used to indicate aerodynamic position (beta angle) of the stage 1 compressor stator vane during engine acceptance testing

Unpackaged Unit Weight:

20.000 pounds

Reference Data And Literature:

Serd no. 3736

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

Yes - demil/mli

Fig:

A505c0
