End Application:

B-1b aircraft w/network centric modifications

Product Name:

Central integrated test system electrical multiplex maintenance unit

Special Features:

Consists of three ruggedized laptop computers, laser printer, ethernet hup to aircraft cable, three pc to hub ethernet cables, print server/ethernet hub unit, software programs

Functional Description:

Depot level test station used to fault isolate and verify repair actions via ethernet cabling

Reference Data And Literature:

Serd 42e08c0114

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

Yes - demil/mli

Fig:

A23800
