Ac Voltage Rating:

115.0 volts

Frequency Rating:

Between 60.0 hertz and 400.0 hertz

End Application:

Radar f-4c aircraft

Electrical Power Source Relationship:

Self-contained

Inclosure Feature:

Multiple item w/housing

Test Type For Which Designed:

Electric modules

Phase:

Single/three

Special Features:

Programmed testing; types of tests: voltage and resistance measure; operational; fault isolation; continuity tests; and calibration adjustments; c/o program control panel; high-voltage power supply; cathode follower panel; oscilloscope (tektronix rm45); ac vtvm (ballantine 310as12); digital voltmeter (non-linear); converter (non linear systems); pre-amp (tektronix type ca); multimeter (simpson 260); oscillator (hp 200cdr); counter (hp 523dr); power supply (sorenson qb28-8); low voltage power supply; voltage readout panel; follower calibration panel; power control and monitor panel; and power transformer and cathode

Functional Description:

Provides a means of testing and troubleshooting each plug-in module of target intercept computer cp-682/apa-157 and radar modulator md-469/apa-157

Reference Data And Literature:

T.O. 33d5-12-165-1, -501

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

Yes - demil/mli

Fiig:

T228-a
