End Application:

B52 evs turret drive motor

Special Features:

Fits standard 19 in.Racks, occupies 12.250 in.Rack space, 16.500 in.Dp; medium voltage, hi capacity impulse type; safety interlock; two capacitor banks of 7200 micro farads, operating at maximum emf 350 v ea w/total energy storage of 880 watt-seconds or joules; the applied voltage level can be varied from 180 to 700 v in 7 steps; operates from 115 to 230 v at 50 or 60 hz; current consumption 12 amps at 115 v

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No
